

Interactive and Script mode

C does **NOT** naturally support **interactive mode** like Python.

In languages like Python (e.g., Python), you can type code line-by-line and get immediate output.

But in C, you **must compile first** before execution.

Script Mode (Actual C Working Mode)

This is the **real way C works**.

Steps:

1. Write full program in a file (program.c)
2. Compile using compiler
3. Execute the program

Feature	Interactive Mode	Script Mode
Execution	Line by line	Whole program
Compilation	Not required (in interpreted languages)	Required
Speed	Slower	Faster
Error checking	Immediate	After compilation
C Support	Not native	Yes
