

C program structure

```
// Documentation
/**
 * file: sum.c
 * author: you
 * description: program to find sum.
 */

// Link
#include <stdio.h>

// Definition
#define X 20

// Global Declaration
int sum(int y);

// Main() Function
int main()
{
    int y = 55;
    printf("Sum: %d", sum(y));
    return 0;
}

// Subprogram
int sum(int y)
{
    return y + X;
}
```

Sections	Description
/** * file: sum.c * author: you * description: program to find sum. */	It is the comment section and is part of the description section of the code.
#include<stdio.h>	Header file which is used for standard input-output. (pre-processor directive section)
#define X 20	This is the definition section. It allows the use of constant X in the code. (pre-processor directive section)
int sum(int y)	This is the Global declaration section includes the function declaration that can be used anywhere in the program.
int main()	main() is the first function that is executed in the C program.
{...}	These curly braces mark the beginning and end of the

	main function.
printf("Sum: %d", sum(y));	printf() function is used to print the sum on the screen.
return 0;	We have used int as the return type so we have to return 0 which states that the given program is free from the error and it can be exited successfully.
int sum(int y) { return y + X; }	This is the subprogram section. It includes the user-defined functions that are called in the main() function.
